## 1 Problem 6

4. `class(df1)` is `data.frame` and `class(df)` is `SparkDataFrame`
5. it is not able to find "inherited method" in order to operate on `df1` because it is not a data frame compatible with Spark
6. again it does not work because its not formatted for Spark

## 2 Problem 7

I would definitely be interested in scraping from sports databases, especially historical daily individual NBA statistics (i.e. box scores). I would also be interested in financial data but OU has access to WRDS, so I feel like anything I would scrape would pale in comparison to that database.
